

53 Year-Old with 1.2 cm, Grade 2 tumour

Brazil

Recurrence
Score[®] Result

10

Age	53	PR Status (IHC)	5%
Menopausal Status	Pre-Menopausal	HER2/NEU Status	IHC 0 (negative)
Tumor Type	Ductal	Ki-67 Status	9%
Tumor Size (cm)	1.2	Histologic Grade	2
ER Status (IHC)	98%	Lymph Node Status	Negative
General Health	0		
Treatment Given	Tamoxifen		

Disclaimer: These case studies are brought to you for educational purposes only and should not be interpreted as an endorsement of Exact Sciences or its services by the submitting physician. The information reflects the interpretive diagnostic opinions of the treating physicians and is not intended to represent a standard of care. The case studies describe real-life cases of patients who have been prescribed the Oncotype DX[®] test. They are not necessarily representative of all tested patients, and the result in any given case will vary. The examples are not necessarily representative of all of those who will use our clinical tests. Exact Sciences does not endorse any of the contributors featured on this site and takes no view as to the treatment decisions reported in these cases.

Lymph Node
Status

Negative

Exploratory Subgroup Analysis for TAILORx and NSABP B-20 indicate that Recurrence Score[®] and age are the strongest predictors of chemotherapy benefit¹. The absolute reduction of distant recurrence from chemotherapy for patients >50 years and ≤50 years is shown here for RS groups: 11-15, 16-20, and 21-25 from TAILORx, and 0-10 and 26-100 from NSABP B-20².

Age	RS 0-10	RS 11-15	RS 16-20	RS 21-25	RS 26-100
>50 years	No CT Benefit (<1%)				>15% CT Benefit
≤50 years	No CT Benefit (<1%)	~1.6% CT Benefit	~6.5% CT Benefit	>15% CT Benefit
